SW DEVELOPER

DOES THIS SOUND LIKE YOU?

You love a fun, relaxed, respectful and supportive work environment. With a little bit of edge to it.

You want to practice your craft in a reasonable project environment, typically Agile with reasonable management of uncertainty.

You thrive on "new" and "flexible". Flex time and flex location are desirable too.

AND….

You want your work to be meaningful. You interact with your customers and end users as much as possible and you like going on site.

You love learning. You are energized by new technologies, domains, process and people.

You share your knowledge freely and thrive on mentoring and being mentored.

You love heads down focus and smashing through gnarly technical challenges. But you also crave the bigger picture that comes with understanding the customer's business.

You think like a project manager and a business analyst too.

You are a budding entrepreneur; you soak up exposure to the business landscape and operations like a wet sponge and you like to contribute beyond your "day job".

You like variety.

You appreciate Agile Scrum.

You "own your own experience" at work; you create a professional yet fun and positive work environment.

SOFTWARE DEVELOPER WANTED!

Today we are seeking an experienced intermediate to senior-level C# Developer for an interesting project. This is a contract position with potential to convert to permanent.

Note that our needs change frequently, so even if you don't have C# experience, we still want to hear from you! All levels of experience. Desirable experience includes some combination of:

HTML5, AngularJS, jQuery, JavaScript and various .js frameworks, C#.NET, Python, PHP, React, C#.NET, Linux, Java, Oracle and SQL Server.

Deployment frameworks such as OpenShift, Docker, Kubernetes, AWS and MS Azure, TFS and VSTS.

Test frameworks including Geb, Spock, Protractor, SpecFlow.

Experience with GitHub and Open Source projects.

In addition to software development, the role will include some or all of:

Agile Scrum process, including story estimation, sprint planning, daily standups, demos and retrospectives.

Architecture.

Project planning, including work breakdowns, estimation and development planning.

Business Analysis. Collaborating with the customer and project team to help define their solution and breaking the development down into epics and stories.

Developer testing and code reviews.

ARE YOU OUR NEXT ROK STAR?

If this description has resonated with you at all then we want to hear from you. Reach out; tell us why it's a great fit! Let's talk.
